

We Build Turnkey Energy Systems

**Hydroelectric • Wind • Solar • Geothermal • Waste-to-Energy
Turbines • Generators**

Systems up to 5,000 Megawatts of Power

About Godman Power Group

Godman Power Group (GPG) is a highly skilled engineering integrator and builder of power and energy solutions and services. We combine innovative design, quality construction, and well-planned and efficiently executed implementation with comprehensive support, throughout project lifecycle. Our best-practice approach features a balance of conventional and renewable energy resources, combining tried-and-true technologies with the emerging solutions to provide on-time delivery of economical and accessible power, wherever it is needed.

Energy analysis and assessment: GPG's certified energy professionals will visit your facilities and identify opportunities for improvement.

Energy engineering: GPG does all environmental, seismic, electrical, civil, structural and architectural engineering for systems, including all general arrangements, electrical, installation, power cables, and system automation.

Construction: GPG conducts all general contractor and construction work on site for projects, to include concrete design and implementation, structural steel framing design and construction, and transmission line design and construction.

Project management and commissioning: GPG is your turnkey solution to implementing power and energy projects from conception through commissioning.

Measurement and verification: Upon project completion, GPG will verify project savings by measuring actual energy consumption against established baseline consumption.

Rebates: Our energy management team tracks in handles the entire application process for all rebates and tax incentives, working with utility providers across the country.

Flexible financing and contracting: GPG provides flexible options to meet your payback and cash flow objectives.

Operations Support: GPG's operations teams support the maintenance and production of the power system. We have reliable servicing and parts teams 24 hours per day, 7 days per week.

Benchmarking and sustainability: We use the highest benchmarking tools to measure projects achievements toward sustainability.

Products and Services

GPG works worldwide with leading energy equipment manufacturers and offers affordable systems in hydroelectric, geothermal, solar, wind, turbines, and waste-to-energy.

Energy Solutions

- Turbines—Natural Gas and Diesel
- Aquatic Turbines
- Solar
- Wind
- Hydroelectric
- Geothermal
- Waste-to-power
- Microgrid Design and Installation

Engineering and Design

- Environmental, Seismic, Electrical, Civil, Structural, Architectural
- General Arrangement and detailed drawings with construction, mechanical, piping,
- Architectural, infrastructure, electrical, installation, power cables, and system automation
- Feasibility studies and preparation of technical recommendations
- Preparation of technical specifications
- Determining criteria for subcontractor selection
- Contract control and reporting
- Bid evaluation

Construction

- General Contractor and Construction
- Concrete design and implementation
- Structural steel framing design and Construction
- Transmission line design and construction
- Control, Monitor, and Report Bill of Materials
- Licensed, certified general contractor for new power system site builds

Operations and Support

- Training
- Maintenance
- Parts Support
- Onsite and Field Support
- Help Desk Set Up
- Remote Support
- Security

Project Management

- Project and Program Management
- Finance Budget Planning
- Requirements, Design, and Implementation, Engineering Reviews
- Test Plans, Quality Assurance, Testing
- Training Documentation
- Control and Compliance Reporting
